● Create a New Postman Collection:

- Open Postman and click on "Collections" in the left sidebar.
- Click on the "New Collection" button and give it a name, e.g., "Weather API Client."

● Create a New Request:

- Inside your collection, click on "Add a request."
- Give your request a name, such as "Get Weather Report."

● Configure the Request:

- Set the request type to "GET."
- Enter the API endpoint URL provided:
  https://samples.openweathermap.org/data/2.5/weather?q=London,uk&appid=b6907d289e10d714a6e88b30761fae22
- You can include any necessary query parameters and headers for the API.

● Test the Request:

- Click the "Send" button to test the request. You should see the API response in the Postman interface.

● Organize the Request:

- Add a brief description of the request for reference.
- You can also add pre-request scripts, tests, and authentication if required.
